

Holmatro is one of the world's leading companies in the field of hydraulic cutting and spreading. As a manufacturer with almost 40 years of experience with a very wide range of cutting and spreading applications, Holmatro is pre-eminently a specialist in this field. Holmatro has, as no other, the know-how necessary to the development of adequate cutting and spreading solutions at its disposal. This is what has made our new line of mobile and stationary hydraulic industrial cutters possible, a line which has been specially developed for protracted use under the most testing circumstances. As well as the details of our newest products this brochure also provides an overall picture of our complete range of industrial cutters and spreaders, with solutions for almost any application you could think of.

#### Ergonomics

During the development phases of the new line of Holmatro<sup>®</sup> industrial cutters our engineers have paid special attention to the ergonomic factors. This has resulted in a new concept: a tool that can rotate in any direction and under any angle! This means that the person operating the tool can cut objects without first having to place them in a particular position. This will clearly enable productivity levels to be raised. Of greater importance is the fact that the physical demands made on the operators have been greatly reduced.

#### An answer to every need

A typical industrial cutter set consist of a pump and a cutter (picture shows stationary cutter with pump). However we realise that every application calls for its own solution. That is why we offer both a wide range of pumps and a wide range of cutters, with a number of interchangeable blade types so that every need can be answered.

## Features

### ✔ User-friendly and ergonomic

- The mobile cutters are lightweight, easy in use and transportation, and fitted with a proportionate, user-friendly, dead man's handle.
- The stationary cutters are fitted with a unique rotation mechanism whereby the tool can be easily turned to any position and under any angle. They are operated by a simple electric push button. The physical demands made on the operator - often considerable during the type of continuous processes this type of cutter is normally used for - are hereby greatly reduced.

### ✔ Quick to use

- Speed of use contributes importantly to an efficient (production) process.

### ✔ For a wide range of applications

- Various blade types available for a diversity of applications.
- Powerful cutters with cutting capacities of up to 30 tons.

### ✔ Blades are quickly and simply exchanged and interchangeable

- Holmatro® offers various blade types for a diversity of applications. All blades are interchangeable thus enabling the cutters to be widely utilised.
- Quick and simple maintenance reduces down time to a minimum. All cutters are supplied complete with a maintenance set.

### ✔ Safe

- The cutters are equipped with a dead man's function.
- All moving parts have optimal shielding.
- The tools can only be operated by using both hands.
- All pumps come standard with a pressure release valve.

### ✔ Reliable and durable

- After taking special notice of the user's requirements Holmatro® industrial cutters have been specially developed for industrial purposes whereby equipment has to undergo protracted use under testing circumstances.

matro®

### Easy to use, safe to operate

As well as being extremely user-friendly Holmatro® cutters are outstanding in the safety of their operation. Attributes such as the dead man's function, shielding of all moving parts and the necessity of using both hands during operation greatly limit the chances of accidents happening.

### Quick and simple exchange of blades

Holmatro® industrial cutter blades are not only durable but also extremely simple to change yourself should you need to utilise your Holmatro® cutter for a wider range of applications.

## Mobile trolleys and cranes

Holmatro<sup>®</sup> mobile trolleys are pre-eminently suitable for quick and easy transport by one person of a mobile set, i.e. a cutter and a pump. The Holmatro<sup>®</sup> crane provides an ideal suspension point for your cutter if such a point is not available on the location of your choice.

with mobile cutter ICU 10 A 40

### Important features trolleys:

- ✔ Complete mobile set consisting of pump and cutter can be transported quickly and easily by one person.
- ✔ With inflated tyres:
  - Suitable for indoor and outdoor use
  - Suitable for various floor and ground conditions

### Important features cranes:

- ✔ Provides a suspension point for your stationary cutter wherever you want one
  - You are not dependent on existing suspension points or systems
- ✔ With adjustable legs
  - Can always be levelled
- ✔ Measurements
  - Bottom plate: 1000 x 1000 mm
  - Total height: 3190 mm or 2690 mm
  - Height suspension point: 2700 mm or 2200 mm
  - Arm length: 2000 mm
